

O O bet365

ite the difference! So why does a minecraft day go by so much faster than a real life? It's not just the difference in time, but the way we experience it. In Minecraft, a day is 20 minutes in real life, but it feels like a whole day. This is because of the way the game is designed. The day-night cycle is much shorter than in real life, and the game is designed to be played in short bursts. This means that you can play for a few minutes and feel like you've spent a whole day. This is why so many people love the game. It's a great way to spend a few minutes of your time, and it's a great way to escape from the real world.
