Grounding transformers are typically used to:

 Provide a relatively low-impedance path to ground, thereby maintaining th
 e system neutral at or near ground potential. Limit the magnitude o
 f transient overvoltages when restriking ground faults occur. Provide a source o
 f ground fault current during line-to-ground faults.

NGR Sensing Resistors are attached in p
 arallel to the Neutral Grounding Resistor.

 The sensing resistor allo
 ws a protective relay which detects resistor failure in a continuous manner
 . Sensing Resistors are used in combination with neutral grounding resis
 tor monitor relays.
