Sertaconazole Nitrate Lotion is a potent antifungal agent that inhibits the growth of fungi by interfering with the synthesis of ergosterol, a key component of the cell membrane. This action leads to the disruption of the membrane structure, ultimately resulting in cell death. Sertaconazole Nitrate Lotion is highly effective against various types of fungi, including those that cause skin conditions such as athlete's foot, genital infections, and oral thrush. It is particularly effective against different forms of fungi, including those that cause candidiasis on the skin, genital areas, and in the mouth. Additionally, it is effective against tinea pedis (athlete's foot).

Types of infections that can be treated with Sertaconazole Nitrate Lotion include:

Candidiasis on the skin, genital areas, and in the mouth;

Athlete's foot (tinea pedis), a fungal infection of the feet caused by a fungus that thrives in warm, moist environments.
