When in used together, these medications can help treat

scalp condition such as seborrheic dermatitis. A common reason that causes

an itchy (and flaky) scalp. The combination of sertaconazole nitrate and mometasone furoate can help alleviate

symptoms such as itching.

Itching

It is important to follow the instructions provided by your healthcare

provider when using these medications. Typically, the solution is applied

directly to the scalp and massaged in gently. You may take several

weeks of use to see improvement on symptoms.

As with any medication, sertaconazole nitrate and mometasone

furoate topical solutions can cause side effects. Common side effects may include

itching, burning (or irritation at the application site).

If you experience severe symptoms such as worsening of symptoms or

an allergic reaction,

stop using the medication and contact your healthcare provider.

In summary, sertaconazole nitrate and mometasone furoate topical solution

is a medication used to treat scalp conditions such as seborrheic dermatitis.

By combining an antifungal medication and a corticosteroid,

it can help

relieve symptoms and reduce inflammation.

For more information, visit our website or contact your healthcare provider.

Some of the most effective ways to help you are:

1. Use the medication as directed.

2. Avoid using other hair products on the scalp.

3. Avoid scratching the scalp.

4. Use a gentle shampoo.

5. Avoid hot water.
